SHIPYARD: AMUR SHIPYARD 199 LOCATION: KOMSOMOLSK, USSR GEO COORDS: 50-33N 137-02E  KEY TO ANNOTATIONS  1. Transporter dock (LOA approx 460').  2. Possible KRUPNYY Class DDGS hull (LOA approx 450'). See annotation 1,  Class SSGNs. Although poor image quality and shadows in this area caused by low sun angle preclude a determination as to the presence of a submarine, there are several factors that indicate a submarine may possibly be berthed in this position. These factors are: (1) a large transporter dock is moored a sufficient distance away (approximately 35-40 feet) from the fitting-out pier to allow a ship having the beam of an "B" Class submarine to occupy a position alongside the pier; (2) the possible KRUPNYY Class DDGS hull is moored "stern to stern" to the transporter dock with its bow angled in against the fitting-out pier. The positioning of the transporter dock and the destroyer hull is similar in concept (obscuring observation from the river) to the berthing arrangement observed in See annotation 2,		CIA/PIR-67208
SHIPYARD: AMUR SHIPYARD 199 LOCATION: KOMSOMOLSK, USSR GEO COORDS: 50-33N 137-02E  KEY TO ANNOTATIONS  1. Transporter dock (LOA approx 460').  2. Possible KRUPNYY Class DDGS hull (LOA approx 450'). See annotation 1,  3. Berthing space. This space has, in the past, been utilized for the fitting-out of "E" Class SSGNs. Although poor image quality and shadows in this area caused by low sum angle preclude a determination as to the presence of a submarine, there are several factors that indicate a submarine may possibly be berthed in this position. These factors are: (1) a large transporter dock is moored a sufficient distance away (approximately 35-40 feet) from the fitting-out pier to allow a ship having the beam of an "E" Class submarine to occupy a position alongside the pier; (2) the possible KRUPNYY Class DDGS hull is moored "stern to stern" to the transporter dock with its bow angled in against the fitting-out pier. The positioning of the transporter dock and the destroyer hull is similar in concept (obscuring observation from the river) to the berthing arrangement observed in	1
